

ABDUL RAFAY

Computer Science

+92 3221723347 @ Rafay99940@gmail.com

SUMMARY

Computer Science student with strong programming skills in C++ and Java. Experienced in C++ (up to file handling and basic DSA) and Java Swing application development. Proficient in Object-Oriented Programming (OOP), GUI development, debugging, and problem-solving. Passionate about building efficient software solutions and continuously expanding technical knowledge.

EDUCATION

Matriculation

I.M.C.B I-10/4 Islamabad
2021 - 2023

80.18%

ICS

I.M.C.B I-10/4 Islamabad
2023 - 2025

81.36%

BC CS

Nutech University
2025 - 2029 (3rd semester)
3.51 CGPA

SKILLS

- C++ Programming
- Basic Data Structures & Algorithms
- Time Management
- Java Swing GUI Application
- Video Editing
- Problem Solving & Debugging
- Git & GitHub
- Group Coordination

LANGUAGE

- English
- Urdu

EXPERIENCE

C++ | Large Scale Student Grading System

2025

Technologies: C++, Object-Oriented Programming (OOP), File Handling

- Developed a large-scale console-based Student Grading System supporting up to 100 students.
- Designed a secure login and authentication system for controlled access.
- Implemented student record management including add, delete, search, and grade calculation.
- Used linear search algorithms for efficient student record retrieval.
- Generated professional result cards, transcripts, and grading reports.
- Implemented persistent data storage using file handling.
- Supported educational levels from Class 1 to MS (Master's).

C++ | Tetris Game using SFML

2026

Technologies: C++, SFML, OOP

- Developed a fully functional Tetris game using the SFML graphics library.
- Built an interactive main menu, pause menu, and game over screen.
- Implemented real-time score tracking, level progression, and increasing game difficulty.
- Designed a leaderboard system to store and display high scores.
- Applied Pure Object-Oriented Programming (OOP) with separate classes for game logic, blocks, board management, and UI.
- Added smooth animations, keyboard controls, collision detection, and line-clearing mechanics.
- Optimized gameplay performance through modular and maintainable code.

Java | Quiz & Examination Simulator

2026

Technologies: Java, Java Swing, OOP

- Developed a modern desktop Quiz & Examination Simulator using Java Swing.
- Designed a professional gradient-based graphical user interface (GUI).
- Implemented secure user login and authentication.
- Built a dynamic student management system for handling multiple users.
- Developed timer-based quizzes with automatic scoring and instant result generation.
- Applied Java OOP concepts including inheritance, encapsulation, abstraction, and polymorphism.
- Used event handling, exception handling, file handling, and modular architecture for maintainable code.
